## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

### **DETAILED ACTION**

This is to acknowledge the receipt of "Applicant's argument/Remarks made in an amendment" filed on 1/11/2010.

#### ***Status of Claims***

Claims 1-20 are pending in application, and claim 1 is an independent claim.

#### ***Status of the Previous Rejections***

Applicant's arguments, "Applicant's argument/Remarks made in an amendment", filed on 1/11/2010, with respect to claims 1-20 have been fully considered and are persuasive. The previous rejection of claims 1-20 on the ground of nonstatutory obviousness type double patenting as being unpatentable over claims 1-20 of copending application No. 10/557416 has been withdrawn according to MPEP 804 (B)(1).

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Amy E. Schmid on 1/25/2010. The application has been amended as follows:

1. (Current amendment): A warm control rolling method, for manufacturing steel mainly composed of fine ferrite particle texture with average ferrite grain size controlled by a desired value of 3  $\mu\text{m}$  or less, which comprises,

rolling the steel, in continuous multipass rolling at a rolling temperature range of 350°C to 800°C, in a condition where the rolling condition parameters expressed in formula (1)

$$Z = \log \left[ \frac{\varepsilon}{t} \exp \left( \frac{Q}{8.31 (T + 273)} \right) \right] \quad (1)$$

$\varepsilon$ : strain

$t$ : duration from start till end of rolling (s)

$T$ : rolling temperature ( $^{\circ}\text{C}$  [ $^{\circ}\text{C}$ ]), or average of rolling temperature of each pass in the case of multipass rolling)

$Q$ : 254,000 if mother phase of texture just before rolling is ferrite, bainite, martensite, or pearlite; 300,000 if mother phase is austenite,

$Z$  is 11 or more (in case the texture just before rolling is ferrite, bainite, martensite, or pearlite, that is, Fe crystal structure is bcc) or 20 or more (in the case the texture just before rolling is austenite, that is, Fe crystal structure is fcc), and

wherein at least one pass interval is longer than 20 seconds, so that the material temperature upon start of rolling of each rolling pass does not exceed the maximum temperature of 800°C, and the material temperature during rolling and right after final rolling (~~within 1 second~~) within 1 second is not 350°C or lower, and

so that, in each rolling pass, temperature  $T_{x-out}$  right after rolling ~~(within 1 second)~~ within 1 second is not higher than temperature that is higher than entire temperature  $T_{x-in}$  by 100°C and the material temperature right after rolling ~~(within 1 second)~~ within 1 second is not lower than temperature that is lower than the temperature right before rolling by 100°C.

***Allowable Subject Matter***

Claims 1-20 are allowed.

The reasons for allowance are as following:

Fujioka et al (JP'233) teaches a process of producing a high strength steel comprising the rolling of steel in one or more passes at a temperature of 500-700°C, a strain rate of 0.1-20 s<sup>-1</sup> and a pass interval of 20 s or less, wherein the steel prior to the step of rolling has a ferrite microstructure, which includes the controlling of rolling time, strain, grain size, and rolling temperature. However, JP'233 does not specify controlling the continuous multi-pass rolling by at least one pass interval is longer than 20 seconds in order to adjust the material temperature to suit the condition as described in the equation (1) in the instant claim 1. In contrast, JP'233 strictly limits the pass interval within 20 seconds (Abstract of JP'233).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delay, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on statement of Reason for Allowance".

***Conclusion***
